PROJECT NARRATIVE

This revision eliminates the second detention basin and lowers the remaining detention basin as well as modifying the outlet control structure from the October 4, 2016 proposal and adds items from the peer review.

This project, “Modifications to the Amended Definitive Plan of Land,” Hopping Brook Road, encompasses the construction of a roadway extension including drainage and utilities.

The design of the drainage system, including the detention/infiltration basin was calculated based on a future building and parking area expansion, however, this drainage report will focus on just the development of the roadway, drainage and utilities. Proposed site drainage will be presented as each site is designed and submitted for approval. The proposed site designs will include roof infiltration and runoff treatment at the individual sites.

The original design included two detention basins one to the east and the other to the west of the proposed roadway. This design moves the proposed road further to the east to allow for one major detention basin on the westerly side of the roadway, allowing for grading that reduces the impact on the adjacent wetland buffer zone.

DRAINAGE NARRATIVE

As required by the Town of Holliston, Massachusetts and MassDEP’s Stormwater Handbook, a storm water analysis was performed for the project at Hopping Brook Road. The method of analysis is the SCS method for hydrologic conditions. The SCS method utilized TR-55 and HydroCAD stormwater modeling system to analysis the 2-year, 10-year, 25-year and 100-year, 24 hour storm events. The “Rational Method” and “Manning’s Equation” was utilized for the 25-year storm for the analysis of the roadway piped drainage system.

The Cross Culverts in the wetland area have no change from the original design, no design information on them is provided in this report as they have more than enough capacity as designed.

Hydrologic Existing Conditions:

The existing site runoff generally flows toward the west. The predominant hydrologic soils group for the project is “Woodbridge fine sandy loam” with a hydrologic value of “C” and “Paxton fine sandy loam with a hydrologic value of “C” and a smaller area of “Charlton Hollis Rock Outcrop,” with a hydrologic value of “A” is present, this was also noted in a report titled “Permeability Testing and Measured groundwater levels, Hopping Brook Park, Holliston, MA,” prepared by The Geotechnical Group, Inc. dated August 2005. In this design an overall Hydrologic Group “C” was used for the pre-developed analysis as well as the post-developed analysis.

Subcatchment Area 1S contains approximately 2,539,490 sf and drains to the wetland to the west and is generally wooded. Subcatchment 2S, also flows to the wetland area to the west and contains 1,970,057 sf of wooded area.

The overall pre-developed flow to the west is represented by Link 1L, “PreDeveloped”.

Hydrologic Proposed Conditions:

Under proposed conditions the same design point location was analyzed for peak flow discharge for the 2-year, 10-year, 25-year and 100-year, 24 hour storm events.

There are eleven Subcatchments 10AS, 10BS, 10CS, 11S, through 16S, 18S, & 19S, included in the proposed condition.

Subcatchment 10S from the previous report was broken down into three (3) Subcatchments, 10AS, 10BS and 10CS to show that the culverts will carry the flow from 10AS and 10BS, and that 10CS will flow down to the main cross culverts without any increase in the post-developed condition. All Subcatchments are undeveloped except 13S and 14S which is the location of the detention/infiltration basin and contain grass areas, also Subcatchments 15S and 18S represent the improved roadway section.

The Stormwater for the roadway will be treated using forebays and extended detention as well as two structural BMP's, Contech CDS units.

Proposed site development stormwater design will be presented as sites are designed and submitted for approval.

Because Subcatchment 2S(19S) will remain undeveloped for this phase, the developed portion of the site will be summarized. When Subcatchment 19S is proposed to have the roadway extended and sites in that location designed, drainage reports will be submitted for review with the site plans.

The developed flow to the east is summarized by the link "10L", labeled "PostDeveloped." The preconstruction flow is summarized by the Subcatchment 1S.

The peak discharge results are in the following table.

	Peak Discharge Summary Table (cfs)			
	Design Storms			
	2-Year	10-Year	25-Year	100-year
Pre-Developed (1S)	14.32	34.49	46.62	65.87
Post-Developed (10L)	10.05	22.75	30.65	43.33

In conclusion, the 2-year, 10-year, and 100-year peak rates of runoff are predominately maintained under proposed conditions to the design point.

DETENTION BASIN/INFILTRATION SUMMARY

Detention basin “10P” is designed with two forebays to treat for TSS removal from the two inlet pipes from the roadway runoff. Infiltration is provided by the detention basin, additional infiltration of roof runoff will be provided when the project is developed.

	Detention Basin Data (10P) Berm Top of Slope Elev: 282.00			
	2-Year	10-Year	25-Year	100-year
Peak Elevation (ft.)	277.07	277.98	278.42	279.06
Time to Drain (hours)	12±	15±	15±	15±
Recharge (cf)	17,643	29,284	34,641	41,494
Time to Drain (hours) (No Recharge)	15±	15±	15±	18±
Peak Elevation (ft.) (No Recharge)	277.14	278.06	278.50	279.14

TSS Removal

Two roadway sections (15S) flow into Forebays sized to treat 1-inch of runoff over the paved areas (sidewalk and roadway). Another two roadway sections (16S & 18S) use structural treatment units, Contech CDS units to treat for over 80% TSS removal for the roadway and sidewalk impervious areas.

Manning's Pipe Calculations and Culverts

The storm drainage calculations on page 102 are based on the 100-year storm. The culvert data on pages 100 and 101 as well as in the stormwater management calculations indicate that the culvert pipes are designed to handle the 100-year storm.

DEP STORMWATER MANAGEMENT STANDARDS:

Standard 1: All proposed impervious surfaces are treated and will not cause erosion in adjacent wetlands and waters of the Commonwealth, as BMP measures are proposed in accordance with the design requirements of the Stormwater Management Handbook.

Standard 2. The proposed development peak discharge rates predominately meet predevelopment discharge rates for the 2-year, 10-year, 25-year and 100-year storm events for the design point.

Standard 3. 73,660 s.f. of additional impervious surfaces (Roadway & sidewalk) will be created as part of the proposed project. The amount of recharge required is $(73,660 \times 0.25/12) = 1,534$ c.f., based upon an underlying hydrologic soil group C. As seen in the detention basin data tables, more than adequate recharge is provided.

This project meets Standard 3 requirements.

Standard 4. TSS Removal of 80% or greater.

Two Contech, CDS structural units will be used on this project. The units were analyzed for 1-inch of runoff over the paved and sidewalk areas. CDS16 will remove 88.9% of the TSS and CDS22 will remove 82.5%.

(See the CDS TSS reduction calculation within this report.)

The forebays have been sized to treat 1" over the paved and sidewalk surface area flowing into the basin. Impervious area to the north forebay is 17,545 s.f. $\times 1"/12 = 1,462$ c.f. The forebay will provide 4,101 c.f. of storage. Impervious area to the south forebay is 22,036 s.f. $\times 1"/12 = 1,836$ c.f. The forebay will provide 5,731 c.f. of storage. The forebays and extended detention basin as well as the structural units, will provide 80% TSS removal. (Note; as individual lots are designed, they will be designed to meet all DEP stormwater requirements and the Town of Holliston's requirements.

This project meets Standard 4 requirements.

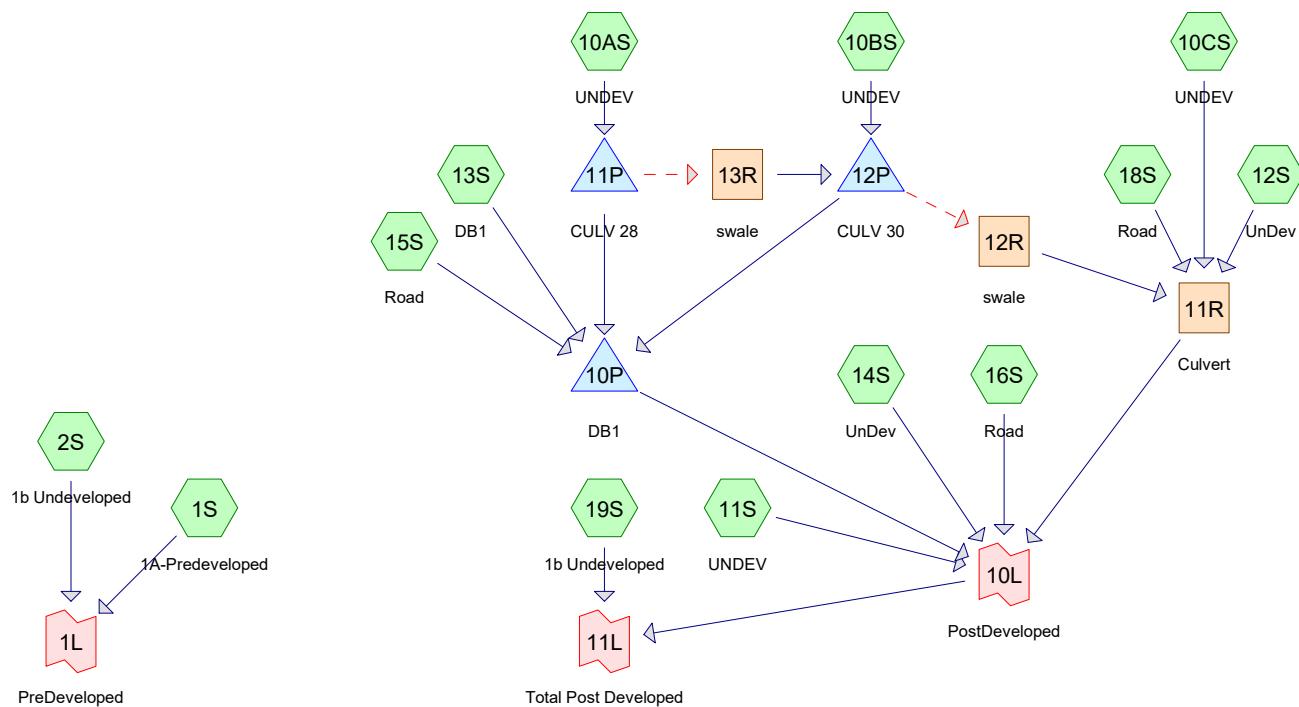

Standard 5. The proposed development will not generate higher potential pollutant loads, and therefore will not require additional BMP practices. Future site design may have this requirement.

Standard 6. The proposed work is not within an Outstanding Resource Water. The 1-inch rule was used to calculate the water quality volume for the Contech units and the forebays.

Standard 7. Not applicable.

Standard 8. Erosion and sediment control measures are proposed during construction. They include first the installation of an erosion control barrier and catch basin protection prior to construction. Construction period pollution prevention and erosion and sedimentation control plans were previously submitted under the previous amendment and remain the same.

Standard 9. An operation and maintenance plan was previously submitted under the previous amendment and is updated in this submittal.

INSTRUCTIONS:

1. Sheet is nonautomated. Print sheet and complete using hand calculations. Column A and B: See MassDEP Structural BMP Table
2. The calculations must be completed using the Column Headings specified in Chart and Not the Excel Column Headings
3. To complete Chart Column D, multiply Column B value within Row x Column C value within Row
4. To complete Chart Column E value, subtract Column D value within Row from Column C within Row
5. Total TSS Removal = Sum All Values in Column D

Location: Hopkins Brook Rd.

which enters the BMP

Project: Hopping Brook Road

Location: Holliston, MA

Prepared For: Walter Lewinski - Engineering Design Consultants, Inc.

Purpose: To calculate the water quality flow rate (WQF) over a given site area. In this situation the WQF is derived from the first 1.0" of runoff.

Reference: Massachusetts Dept. of Environmental Protection Wetlands Program / United States Department of Agriculture Natural Resources Conservation Service TR-55 Manual

Given:

Structure Name	Impv. (acres)	A (miles ²)	t _c (min)	t _c (hr)	WQV (in)
CDS-16	0.21	0.0003229	6.0	0.100	1.00
CDS-22	0.94	0.0014675	6.0	0.100	1.00

Procedure:

Determine unit peak discharge using Figure 1 or 2. Figure 2 is in tabular form so is preferred. Using the t_c, read the unit peak discharge (qu) from Figure 1 or Table in Figure 2. qu is expressed in the following units: cfs/mi²/watershed inches (csm/in).

Structure Name	qu (csm/in.)
CDS-16	774.00
CDS-22	774.00

1. Compute Q Rate using the following equation:

$$Q_1 = (qu) (A) (WQV)$$

where:

Q₁ = flow fate associated with first 1.0" of runoff

qu = the unit peak discharge, in csm/in.

A = impervious surface drainage area (in square miles)

WQV = water quality volume in watershed inches (1.0" in this case)

Structure Name	Q ₁ (cfs)
CDS-16	0.25
CDS-22	1.14

CDS2015-4-C DESIGN NOTES

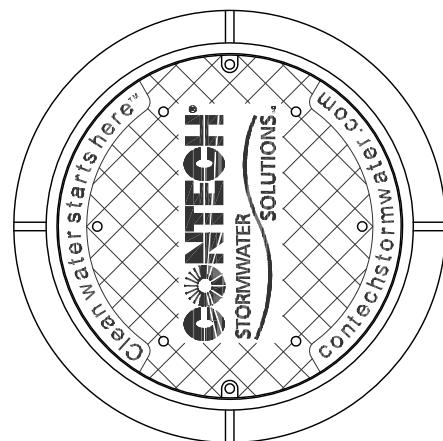

CDS2015-4-C RATED TREATMENT CAPACITY IS 1.4 CFS, OR PER LOCAL REGULATIONS.
THE STANDARD CDS2015-4-C CONFIGURATION IS SHOWN. ALTERNATE CONFIGURATIONS ARE AVAILABLE AND ARE LISTED BELOW. SOME CONFIGURATIONS MAY BE COMBINED TO SUIT SITE REQUIREMENTS.

CONFIGURATION DESCRIPTION

- GRATED INLET ONLY (NO INLET PIPE)
- GRATED INLET WITH INLET PIPE OR PIPES
- CURB INLET ONLY (NO INLET PIPE)
- CURB INLET WITH INLET PIPE OR PIPES

SITE SPECIFIC DATA REQUIREMENTS

STRUCTURE ID	*
WATER QUALITY FLOW RATE (CFS)	*
PEAK FLOW RATE (CFS)	*
RETURN PERIOD OF PEAK FLOW (YRS)	*
SCREEN APERTURE (2400 OR 4700)	*
PIPE DATA:	
I.E.	
INLET PIPE 1	*
INLET PIPE 2	*
OUTLET PIPE	*
RIM ELEVATION	*
ANTI-FLOTATION BALLAST	*
WIDTH	*
HEIGHT	*
NOTES/SPECIAL REQUIREMENTS:	
* PER ENGINEER OF RECORD	

**FRAME AND COVER**

(DIAMETER VARIES)

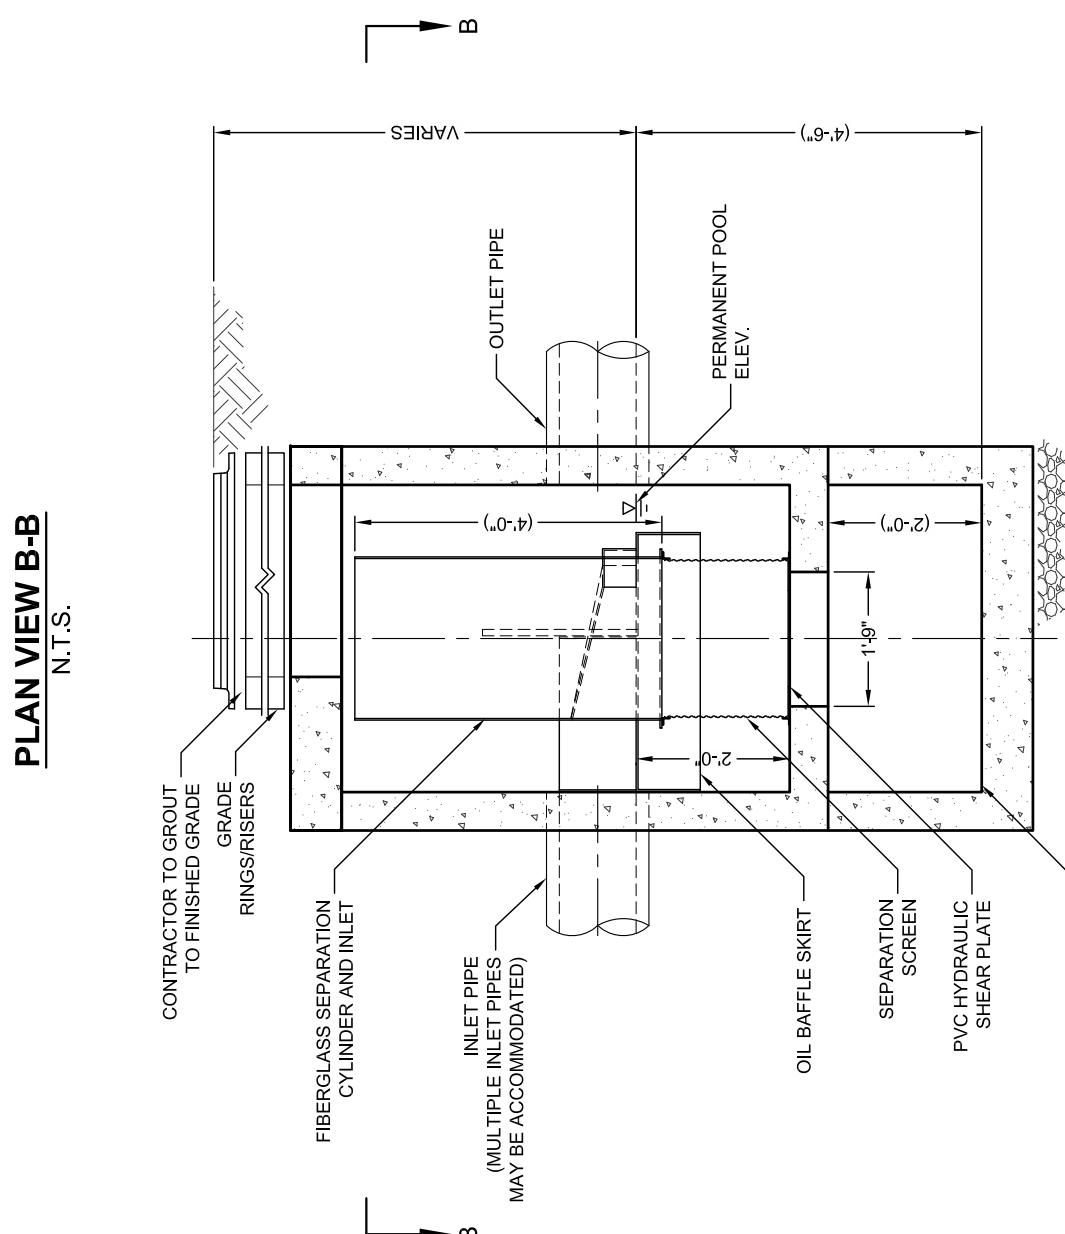

N.T.S.

- GENERAL NOTES
1. CONTECH TO PROVIDE ALL MATERIALS UNLESS NOTED OTHERWISE.
 2. DIMENSIONS MARKED WITH () ARE REFERENCE DIMENSIONS. ACTUAL DIMENSIONS MAY VARY.
 3. FOR FABRICATION DRAWINGS WITH DETAILED STRUCTURE DIMENSIONS AND WEIGHTS, PLEASE CONTACT YOUR CONTECH CONSTRUCTION PRODUCTS REPRESENTATIVE. www.contech-cpi.com
 4. CDS WATER QUALITY STRUCTURE SHALL BE IN ACCORDANCE WITH ALL DESIGN DATA AND INFORMATION CONTAINED IN THIS DRAWING.
 5. STRUCTURE SHALL MEET AASHTO HS20 AND CASTINGS SHALL MEET AASHTO M306 LOAD RATING, ASSUMING GROUNDWATER ELEVATION AT, OR BELOW, THE OUTLET PIPE INVERT ELEVATION. ENGINEER OF RECORD TO CONFIRM ACTUAL GROUNDWATER ELEVATION.
 6. PVC HYDRAULIC SHEAR PLATE IS PLACED ON SHELF AT BOTTOM OF SCREEN CYLINDER. REMOVE AND REPLACE AS NECESSARY DURING MAINTENANCE CLEANING.

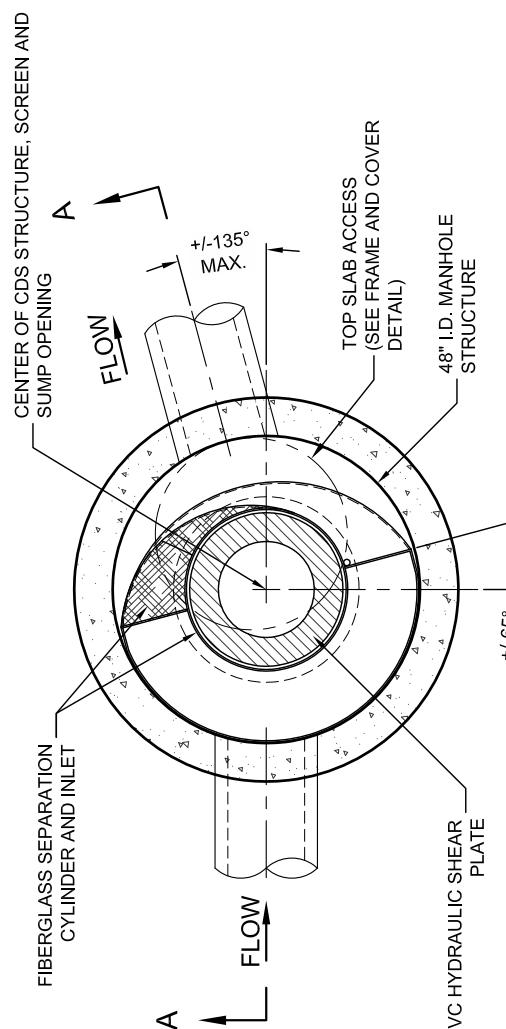

- INSTALLATION NOTES
1. ANY SUB-BASE, BACKFILL DEPTH, AND/OR ANTI-FLOTATION PROVISIONS ARE SITE-SPECIFIC DESIGN CONSIDERATIONS AND SHALL BE SPECIFIED BY ENGINEER OF RECORD.
 2. CONTRACTOR TO PROVIDE EQUIPMENT WITH SUFFICIENT LIFTING AND REACH CAPACITY TO LIFT AND SET THE CDS MANHOLE STRUCTURE (LIFTING CLUTCHES PROVIDED).
 3. CONTRACTOR TO ADD JOINT SEALANT BETWEEN ALL STRUCTURE SECTIONS, AND ASSEMBLE STRUCTURE.
 4. CONTRACTOR TO PROVIDE, INSTALL, AND GROUT PIPES. MATCH PIPE INVERTS WITH ELEVATIONS SHOWN.
 5. CONTRACTOR TO TAKE APPROPRIATE MEASURES TO ASSURE UNIT IS WATER TIGHT, HOLDING WATER TO FLOWLINE INVERT MINIMUM. IT IS SUGGESTED THAT ALL JOINTS BELOW PIPE INVERTS ARE GROUTED.

ELEVATION A-A
