

# WASHINGTON STREET CORRIDOR IMPROVEMENTS

## PROJECT UPDATE

Week of April 23 - 27, 2018

- Construction on Washington Street resumed earlier this month with work involving installation of foundations within the existing sidewalks for traffic signal mast arms. This work began along the eastern side of Washington Street and will progress to the western side.
- Following the installation of the mast arm foundations, the contractor will begin to install new curbing along portions of Washington Street. This work will require some temporary sidewalk width restrictions, and localized parking restrictions on Washington Street. Access to businesses will be maintained at all times.
- Milling and repaving of the roadway is currently scheduled to take place during the month of May.
