

Weekly COVID-19 Report

When the DPH published the updated town by town information this evening, our community risk designation remained at the RED (high risk) level, based on new cases in the 14 day period ending December 26. According to their weekly reports, our numbers increased from 37.5 Average Daily Incident Rate per 100,000 on December 24 up to 40.6 Average Daily Incident Rate per 100,000 on December 31. For the third consecutive week, that is again our highest Average Daily Incident Rate to date.

Metrics (as of November 6) for communities with 10,000-50,000 population

Gray: less than or equal to 10 total cases

Green: less than 10 cases per 100,000 population AND greater than 10 total cases

Yellow: greater than or equal to 10 cases per 100,000 population OR greater than or equal to 5% positivity rate

Red: greater than or equal to 10 cases per 100,000 population AND greater than or equal to 5% positivity rate

*last 14 days refers to the two-week reporting period ending the Saturday prior to the DPH's weekly report

Looking at our list of active cases, there are 25 clusters co-located at single family homes, 1 cluster co-located at an elderly housing complex, 61 individual cases at other single family homes, 5 individual case at multi-family dwellings, and 1 individual case an elderly housing complex. That means our 134 cases are spread out over 92 distinct addresses.

The largest increases this week were in the 30-39 (29%), 10-19 and 50-59 (27%), 60-69 (22%), and 0-9 (15%) age ranges. There were no new cases reported in the 90+ age range.
