

Water Filtration Plant, May 2nd, 2019

The future water filtration plant located at 774 Central Street is proceeding. The plant is approximately 2.5 years out (as of May 1st 2019) before it is actually up and running. At the May Town Meeting (May 6th, 2019) there is an article requesting appropriation of \$600,000 from the water department retained earnings to complete the design of the plant. The completed design will provide the town a more accurate construction cost for financing purposes. The process of design will take about 18 months to complete and within that phase there are a number of permit requirements to be met and a team is put together consisting of MassDEP, surveyors, geo-technical engineers, wetland scientist, a boring contractor, structural engineer, an architect, sub contractors an electrical engineer and instrumentation control, communication and pump engineering contractors. Upon completion of the design phase the Town will move forward with bonding the financing portion of the construction phase and the plant will be put out to bid for construction.
