

New water mains for Norfolk Street are in the process of being design with an anticipated construction start date in late summer/fall of 2024. New water main will be installed from Central Street to Goulding Street. As a separate phase of this project sidewalks will be extended from the Franklin Street area to the Stoddard Park entrance. Along with pedestrian improvements drainage improvements including catch basins and a detention pond will be included. In an effort to consolidate design components of the entire project certain elements will be completed simultaneously. Additional project updates will be provided as we move through the design phase
