239 Littleton Road, Suite 3
Westford, MA 01886

Cc: Patrick Dunford, PE
Senior Project Manager
Vanasse Hangen Brustlin, Inc.

Date: August 31, 2020

Project Name: Geoffrey Park Residential Community

Project Number: Green No. 20082

Subject: Response to Transportation Peer Review Comments

This memorandum summarizes our responses to the Transportation Peer Review Comments prepared by Vanasse & Associates, Inc. (VAI), dated August 24, 2020.

T1: Comment: *"A letter should be provided by the Professional Engineer attesting to their oversight in preparing the document and providing their Massachusetts Professional Engineer Registration number and discipline."*

Response: The document was prepared with the oversight of a Professional Engineer, Corinne Tobias, Civil Engineering Discipline, License Number 53048. This letter is signed by the same engineer.

T2: Comment: *"The study area should be expanded to include the intersections of Cedar Street at Turner Road and Ashland Street at Turner Road as all Project-related traffic will travel through one of these intersections to access the project site. We note that traffic volumes are provided for both of these intersections on the figures in the July 2020 TIAs."*

Response: Cedar Street at Turner Road and Ashland Street at Road have been added to the crash data calculations, they were already included in the traffic analysis sections.

T3: Comment: *"The data collection effort and establishment of the seasonal adjustment were completed in accordance with standard Traffic Engineering and Transportation Planning practices; however, the traffic count data needs to be adjusted following the guidance issued by MassDOT for Transportation Impact Assessments (TIAs) conducted during the COVID-19 pandemic and the Governor's phased "Reopening Massachusetts" strategy.1 We would suggest that the Applicant's engineer obtain historic traffic count data for a location proximate to the study area and compare July 2020 traffic count data to historic traffic counts for July in order to develop an appropriate adjustment factor."*

Response: Research was conducted to locate historical traffic data within the study area, however no data was publicly available through MassDOT or the regional planning agencies which would provide insight into this location. As a result, new count data was collected in order to provide a reference for analysis. In the

Response to Transportation Peer Review Comments

August 31, 2020

Green Project No. 20082

event that the town has additional data available or is aware of historical traffic data in the vicinity we will update the study accordingly.

T4: Comment: *"The traffic count data was performed during the July 4th week, with the turning movement counts (TMCs) performed on July 1st (not July 8th as referenced in the July 2020 TIAS). Traffic data is not usually collected during holiday periods as traffic volumes and trip patterns are not typical of conditions that exist during the majority of the year. Updated traffic volume and travel speed data should be collected, or adjustments made to the data that was collected with back-up calculations provided to substantiate the adjustments."*

Response: July 4th was on a Saturday this year and the Turning Movement Counts were collected on a Wednesday. As school was not in session at this time it is unlikely that the volumes would have been affected by the holiday.

T5: Comment: *"The traffic count data and speed measurements should be provided for all locations. The automatic traffic recorder (ATR) counts were not provided in the Appendix of the July 2020 TIAS."*

Response: The ATR data has been attached to this response letter.

T6: Comment: *"A 48-hour ATR should be performed on Turner Road in the vicinity of Indian Ridge Road on two consecutive weekdays that should include the collection of vehicle travel speed data to be used in evaluating sight distances at the Turner Road/Indian Ridge Road South intersection."*

Response: Cedar Street has a higher traffic volume and less roadway curvature compared to Turner Road, as a result the ATR data on Cedar Street is likely more conservative data with higher volumes and higher speeds.

T7: Comment: *"The motor vehicle crash analysis should be updated to use reconciled crash data for the most recent 5-year period as available from MassDOT (2013 through 2017) and expanded to include the additional study area intersections."*

Response: The crash data was updated for 2013-2017, please see attachments for updated crash reports. All of the crash records show below average crash rates at the study intersections.

T8: Comment: *"The Applicant's engineer should confirm that there are no roadway improvements by others that are planned to occur within or proximate to the study area that would impact traffic volumes or travel patterns within the study area."*

Response: It is listed in section 3.1.2 that the town of Holliston was contacted, and Green was notified that no new developments were being planned.

T9: Comment: *"The trip-distribution pattern for the Project should be reviewed and revised. The existing traffic pattern indicates that approximately 60 percent of the trips associated with the Project will be oriented to/from Route 126, with 45 percent of these trips using Elliot Street to/from the east and the remaining 15 percent (of the 60 percent) using Ashland Street."*

Response to Transportation Peer Review Comments

August 31, 2020

Green Project No. 20082

Response: Existing traffic patterns were used in addition to Census journey to work data in order to develop the trip distribution. Existing traffic patterns may be impacted by outside traffic such as the retail uses along Elliot Street that would not be reflective of traditional commuter behavior. Using the census data, the percent at which that road would be used from the proposed site was determined by looking at the distance from the proposed site to the Town of Workplace. Please see the table below for calculations. The difference between the census and existing traffic patterns averaged to obtain the traffic distribution values used for build volumes.

		Direction to Work Destination								
		A	Elliot Street WB							
		B	Elliot Street EB							
		C	Ashland Street WB							
		D	Ashland Street EB							
		E	Cedar Street NB							
		F	Cedar Street SB

T10: Comment: "The traffic operations analysis should be revised to address the comments provided as a part of this review concerning the COVID-19 traffic volume adjustment, expansion of the study area and refinement of the trip distribution pattern. In addition, the peak-hour factors that are used in the analysis should be based on the measured values and not the default value of 0.92. "

Response: Please see attachments for updated Synchro reports with the revised peak hour factors.

T11: Comment: The location of the sight distance measurements that are presented in Table 7 should be clarified as the access to the Project is proposed to be an extension of Indian Ridge Road South and will not create an “intersection” for the purpose of sight distance measurements. Also, the paragraph preceding the sight distance table mentions speed measurements and posted speed limits along Cedar Street. Sight distance measurements should be provided for the following intersections based on the measured 85th percentile vehicle travel speed on the major roadway or the posted speed limit, whichever is higher:

- *Turner Road/Indian Ridge Road South*
 - *Cedar Street/Turner Road*

Response to Transportation Peer Review Comments

August 31, 2020

Green Project No. 20082

- *Ashland Street/Turner Road "*

Response: Since access to the proposed project is an extension of Indian Ridge Road south table 7 shows the sight distance measurements at Indian Ridge Road South and Turner Road. The paragraph above table 7 has been updated to state that more clearly. The 85th percentile travel speed was from the ATR data collected on Cedar Street.

T12: Comment: *"The recommendations presented in the July 2020 TIAS should be reviewed, revised and expanded as necessary based on the additional analyses and refinements that have been suggested as a part of this review. The recommendations that were provided should reflect the Site Plans and the context of the Project as it relates to Indian Ridge Road South with regard to pedestrian safety and opportunities to implement traffic calming measures to reduce travel speeds.*

Response: Please see the response to comments above as to what has been revised. The Site Access Driveway referenced in the TIAS is the intersection of Indian Ridge Road South at Turner Avenue which should be updated with appropriate pavement markings. As there are no existing pedestrian accommodations to tie into, additional pedestrian facilities along the site drive would not allow for a safe passage into the neighborhood. Given the relatively low trip generation to the site as well as the lack of significant crash history no major impacts to traffic are anticipated.

If there is a need to discuss any of these responses further, please feel free to contact me at (978)-923-0400.

Sincerely,

Green International Affiliates, Inc.

Corinne Tobias, P.E.

CRASH RATE

INTERSECTION CRASH RATE WORKSHEET

TOWN : Holliston COUNT DATE : 2/26/2020

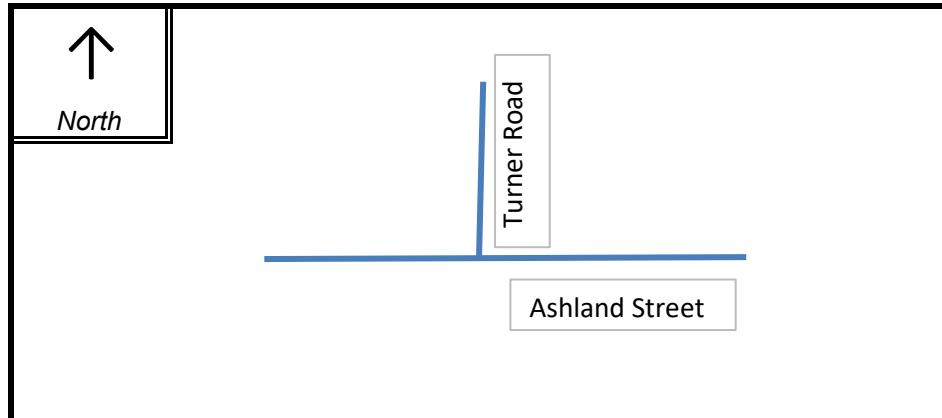

DISTRICT : 3 UNSIGNALIZED : SIGNALIZED :

~ INTERSECTION DATA ~

MAJOR STREET : Ashland Street

MINOR STREET(S) : Turner Road

**INTERSECTION
DIAGRAM**

PEAK HOUR VOLUMES

APPROACH :	1	2	3	4	5	Total Peak Hourly Approach Volume
DIRECTION :	NB	SB	EB	WB		
PEAK HOURLY VOLUMES (PM) :	32	0	101	152		285

"K" FACTOR : INTERSECTION ADT (V) = TOTAL DAILY APPROACH VOLUME :

TOTAL # OF CRASHES : # OF YEARS : AVERAGE # OF CRASHES PER YEAR (A) :

CRASH RATE CALCULATION : RATE =
$$\frac{(A * 1,000,000)}{(V * 365)}$$

Comments : The average crash rate for an unsignalized intersection in District is 0.57

Project Title & Date: Geoffery Park 20082

INTERSECTION CRASH RATE WORKSHEET

TOWN : Holliston COUNT DATE : 2/26/2020

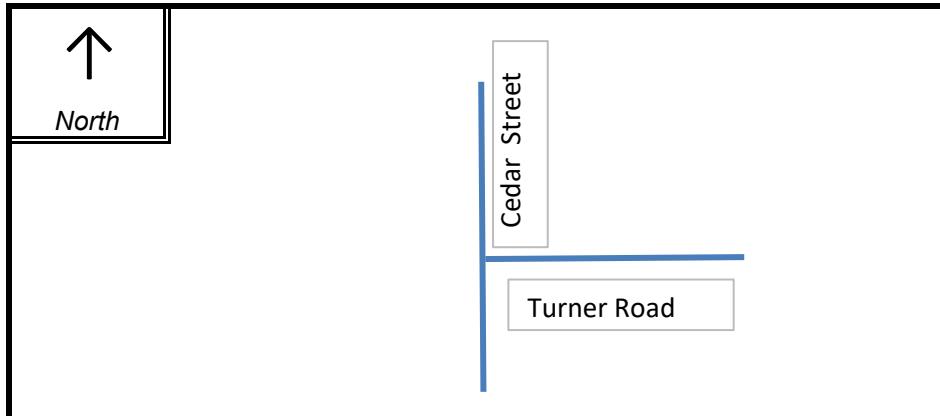

DISTRICT : 3 UNSIGNALIZED : SIGNALIZED :

~ INTERSECTION DATA ~

MAJOR STREET : Cedar Street

MINOR STREET(S) : Turner Road
